

Estate Valuations & Pricing Systems, Inc.

Brief Description

Company Description

Estate Valuations and Pricing Systems, Inc. (EVP Systems) is a privately held company headquartered in Santa Barbara, California. Its president is Michael A. Walker, Ph.D., and he is available at (818) 313-6300 and mike@evpsys.com. Information and technical support are available at (818) 313-6300 and support@evpsys.com.

Product and Service Description

EstateVal is EVP Systems' primary product, and has been in use in various forms for over thirty-five years. It provides Date of Death and Alternate Date valuations for IRS Form 706 filings, including mean pricing, accrued dividends, and accrued interest for domestic and foreign securities. GiftVal (for IRS Form 709), CostBasis and CapWatch are companion programs, tailored for specific uses. They are collected in EVP Office, a suite of Windows applications.

Each application connects to the EVP Data Center via the Internet to perform its evaluations. The Data Center is a cloud-hosted backend that uses redundant servers and multiple geographic locations to support full disaster recovery and business continuity. More information is available in the "Disaster Recovery and Business Continuity" document.

EVP Everywhere is a webservice that provides similar functionality as EstateVal, and is driven by the same code. More information is available at api.evpsys.com.

EVP Professional Services is an outsourcing service that will generate EstateVal, GiftVal, CostBasis or CapWatch reports via e-mail, fax or the post. CUSIP, SEDOL and capital change research is also offered.

Fees

All EVP Office reports and EVP Everywhere evaluations are priced per security processed, at the rates defined at www.evpsys.com/evp/fees_office.html. There are no charges for setup, maintenance, support or upgrades. Billing is monthly, and there is no minimum. A discount schedule is provided based on usage from all accounts associated with a firm, available at www.evpsys.com/evp/fees_discount.html. Professional services are also

billed on a per-security basis, with additional fees for the delivery of reports by fax or FedEx, with details at www.evpsys.com/evp/fees_services.html.

Confidentiality

Each product available from EVP Systems is a Microsoft Windows program, and runs on Windows 10, 8, 7, Vista and XP. All data entry, calculations and printing are performed on the client's computers, and EVP Systems never has access to client's personally identifiable information (PII). Financial data is retrieved by the software by sending a list of security identifiers, the valuation date and report type to EVP's Data Center. Portfolio descriptive information, file names and shares or par value are local to EVP's clients and are never transmitted to or stored by EVP Systems. More information is available in the "Data Privacy Statement" document.

Pricing Accuracy

EVP Systems does not perform any underlying security valuations. The company's primary data source is ICE Data Pricing and Reference Data LLC, and they provide exchange data for stocks and other market-priced securities, and evaluate roughly a million municipal bonds, well over half a million mortgage-backed securities and corporate bonds, on a daily basis. In addition, EVP Systems uses data from Standard & Poors, Nuveen, Lipper, Refinitiv and other data vendors. While EVP makes every effort to ensure the accuracy of the data received from its vendors, EVP Systems' software is designed to calculate and report on that data, not verify it.

Client Computers and Networks

EVP Systems does not access client computers or networks. All connections are client-initiated and described above.

Scope of Services

EVP Systems does not provide any products or services other than EVP Office, EVP Everywhere, and EVP Professional Services, as well as support and billing for each.

The company nor its employees do not visit client sites to perform on-site work, nor do they create custom or client-specific software. EVP Systems does not assign employees to interact solely with specific clients, nor does it subcontract employees to clients or anyone else.
